1. INTRODUCTION

The City of Vaughan (herein referred to as the "City") is committed to modernizing its planning and building application processes to better serve residents, businesses, and development partners. This modernization effort is part of a broader strategic initiative to enhance service delivery, improve operational efficiency, and foster innovation in municipal governance.

As part of this transformation, the City is exploring the use of advanced technologies—including Artificial Intelligence ("AI")—to support and improve the development submissions, review and approvals system. The objective is that AI can enhance the streamlining of workflows, automate routine tasks, improve regulatory compliance, enable data-informed decision-making, and enhance opportunities to support long-term planning and public engagement processes, all of which contribute to a more responsive and transparent planning process.

This *AI for City Building Lab – Request for Expression of Interest (RFEOI)* invites submissions of interest from qualified vendors, researchers, and technology providers who offer AI-driven solutions that address key challenges in the planning and building application lifecycle ("Responses"). The City is seeking to understand the current climate of the market, assess relevant use cases, and identify opportunities for potential future collaboration, pilot projects, or procurement initiatives.

Through this RFEOI, the City aims to:

- Explore innovative applications of AI in planning and building services;
- Identify scalable and adaptable technologies that align with municipal priorities;
- Support continuous improvement and future-readiness in service delivery;
- Advance Vaughan's position as a leader in smart, data-driven urban development.

This RFEOI is a market research exercise—not a formal solicitation—and will inform future direction for the City's initiatives and potential future procurement opportunities. It will not include an exchange of funds of any kind and will not result in an award of business or long-term contract. This RFEOI process is not binding in any way on the City or any Respondents. Following the RFEOI process, the City may, in its sole discretion, elect to invite selected Respondents for interviews, demonstrations, and/or time limited proof-of-concept activities to gain further insight with respect to the information provided in response to the RFEOI opportunity. Furthermore, the City may elect to subsequently pursue a formal competitive procurement process as authorized by its Procurement Bylaw, including an RFP, RFT or RFQ. In circumstances where a solution may be unique in nature or proprietary to the Respondent, the City reserves the right, in its sole discretion, to proceed with a Single Source, or Sole Source award.

The City has requirements and standards with respect to data ownership, privacy, and the use of technological solutions. Any solution the City considers for future use will be required to comply with these requirements, at a minimum. These standards are further described in Sections 11 and 12 of this RFEOI for Respondent review and information.

Notwithstanding, the above, The City may invite select respondents to clarify their Responses through interviews, presentations, demonstrations, or proof-of-concept activities.

1.1 RFEOI SCHEDULE

The City has issued this RFEOI as a market research and information gathering exercise for understanding the interest and potential availability of solutions existing on the market. As such, the City intends to ensure this RFEOI opportunity remains open on the market for a period of six (6) months in the hopes of exploring as many viable solutions and concepts as possible. The City will review responses as they are received and reserves the right to contact any Respondent at any time, including at any period during the RFEOI posting period or post-closing, at the discretion of the City. Respondents are encouraged to submit their RFEOI responses early and as soon as operationally possible.

Although the City intends to proceed according to the following schedule, the City reserves the right to modify or alter any or all dates at its sole discretion by way of Addendum.

Release of RFEOI Document	November 18, 2025
Deadline for Questions to be submitted by Respondents	April 28, 2026
Closing Date and Time	May 19, 2026 at 3:00:00 PM LOCAL TIME
Clarification Interviews and/Demonstrations (if required)	To be scheduled on an as-and-when-required basis at the discretion of the City

**Above timelines are subject to change at the sole discretion of the City*

2. DOCUMENT UPLOAD SECTIONS

Respondents should upload Responses combined as one document, if possible, using the attachment section in the bidding system.

Information provided should be relevant to the overall scope of this RFEOI opportunity. General marketing materials and information that is unrelated to the goals and objectives of this opportunity will be disregarded and will not be reviewed further. Respondents are strongly encouraged to thoroughly review the interest areas identified by the City and respond accordingly.

3. BACKGROUND

Recent legislative changes and Federal and Provincial initiatives to incentivize growth have accelerated planning application timelines, requiring municipalities like the City of Vaughan to meet prescribed housing targets within shorter timeframes. This shift underscores the need for innovative solutions to modernize and streamline the development review process.

(a) Bill 108, Ontario's More Homes, More Choice Act, 2019
Bill 108, *the More Homes, More Choice Act*, received Royal Assent on June 6, 2019, to address housing shortages by speeding up planning application reviews and enabling earlier appeals to the Ontario Land Tribunal (OLT).

Instrument	Bill 139	Bill 108

WWW.BIDSANDTENDERS.COM ORIGINAL DOCUMENT SOURCE

Official Plan/Official Plan Amendment	210 days	120 days
Zoning By-law Amendment	150 days	90 days
Draft Plan of Subdivision	180 days	120days

(b) Bill 23, Ontario's *More Homes Built Faster Act, 2022*
Bill 23, *the More Homes Built Faster Act, 2022*, received Royal Assent on November 28, 2022, to advance the Province's plan to address housing supply concerns by building 1.5 million new homes. Bill 23 supports Ontario's *Housing Supply Action Plan* to increase housing supply and provide access to a greater range of housing options.

(c) Provincial Planning Statement, 2024
The Province of Ontario introduced the Provincial Planning Statement, 2024, which shifted the responsibility for growth forecasting from regional municipalities to local municipalities. Cities like Vaughan are now required to develop their own population and employment forecasts to guide land use planning and ensure sufficient land is available to accommodate growth over a 20 to 30-year horizon.

(d) Housing Supply Action Plan and Municipal Housing Pledge
The Province of Ontario developed a *Housing Supply Action Plan*, which includes various programs and incentives to encourage and accelerate residential development across Ontario, including the *Building Faster Fund*. This fund is intended to support the Province's target of building 1.5 million new homes over the next 10 years.

On February 22, 2023, Vaughan Council committed to developing 42,000 new housing units by 2031. By October 2024, the City achieved 20% of this target (8,521 units) and is on track to meet the remaining 80% (33,479 units) by 2031.

(e) Canada Mortgage and Housing Corporation (CMHC) – Housing Accelerator Fund (HAF)
In October 2023, the City secured $59 million from the Federal government's CMHC Housing Accelerator Fund to increase housing supply across Canada. The Vaughan *HAF Action Plan* includes seven initiatives to expedite housing development, including process improvements and technology investments to accelerate planning approvals, with commitments completed by 2025.

(f) Bill 185, *Cutting Red Tape to Build More Homes Act, 2024*
Bill 185, *Cutting Red Tape to Build More Homes Act, 2024*, received Royal Assent on June 6, 2024, and includes amendments to the *Planning Act* which subsequently impacted the City's Pre-Application Consultation process resulting in this stage becoming voluntary.

(g) Streamline Development Approval Fund (SDAF)
In January 2022, the Province announced $1 million in funding to modernize and accelerate development approvals. Vaughan, with KPMG LLP, reviewed the process and proposed improvements. By October 31, 2023, City staff reported faster processing times for residential planning applications, aiding efforts to increase housing supply. Overall, Vaughan is transitioning to a more urban environment, increasing the need for housing and supportive land uses.

4. OBJECTIVES

PREVIEW
TO DOWNLOAD, CONTACT REGISTERED PLANNERS OF THE PLANNERS.COM
WWW.PLANNERS.COM ORIGINAL DOCUMENT SOURCE

The objectives of this RFEOI initiative include gathering market information on streamlining application review and pre-screening for planning applications, optimizing internal workflows, improving collaboration among stakeholders, and delivering high-quality, transparent services to applicants and the public. By integrating AI into these core functions, the City intends to create a more efficient, responsive, and future-ready planning system including but not limited to:

- **Application Review and Pre-Screening**: streamlining drawing and document analysis and compliance checks, automating pre-screening tasks to reduce processing times while ensuring accuracy and policy adherence. Helps applicants understand the planning process and provides instant compliance feedback on Responses.

- **Data-Driven Decision-Making**: using analytics for scenario modelling and GIS integration to empower data-driven insights, enabling planners to anticipate impacts and evaluate development options effectively.

- **Workflow Optimization:** automating routine tasks such as data entry and offering real-time tracking to enhance process efficiency, reduce circulation distribution times, and provide applicant transparency.

- **Improved Stakeholder Collaboration:** With the right tools and data, AI and automation can enhance spatial analysis and visualization opportunities to better inform the public, facilitate long-term urban planning by analyzing growth patterns and forecasting needs. It can also enhance compliance and risk management and support sustainable urban growth.

- **Improved Service Delivery:** Use of AI technology to create smarter, faster, cost-effective and high-quality services. This can increase value-added work, provide opportunities to improve services based on data and trends collected, provide better modelling analysis, and improve financial management.

- **Enhanced Transparency**: The improved processes will strengthen transparency by enabling applicants to track the status of their Responses, identify potential areas of improvement, and gain clarity on requirements. This fosters a more open and predictable planning experience.

5. CURRENT STATE

The City is undergoing a significant urban transformation, driven by a growing demand for housing and supportive land uses. This shift has led to a steady increase in development activity across the municipality. Since 2020, Vaughan has averaged approximately 164 new development planning applications and 2,900 building permits annually.

In 2024 alone, the Building Standards Department issued 2,294 building permits, representing over $1.89 billion in construction value. Of this, $700 million was attributed to residential development, $200 million to commercial, $816 million to industrial, $101 million to institutional, and $74 million to other development types. This volume underscores the

need for more efficient, scalable, and intelligent planning and building review processes to support Vaughan's continued growth and urbanization.

Official Plan Review Challenges
Reviewing applications for Official Plan compliance can be time-consuming and complex, particularly when proposals involve amendments or diverge from established policy frameworks. Challenges often include policy alignment, assessing land use compatibility, and evaluating long-term impacts on infrastructure and community development. These complexities can lead to extended review timelines, especially when revisions are required to address policy inconsistencies identified during initial assessments.

Zoning Compliance Review Challenges
A substantial portion of the overall review process is dedicated to verifying compliance with the Zoning By-law — a task that can be subject to multiple reviews of the proposal and can become complex depending on the application type. Some common submission deficiencies include but are not limited to; insufficient or missing setback measurements, inaccurate lot coverage calculations, failure to meet parking requirements, unclear building height data, or absence of landscaping, which result in additional time spent reviewing re-submissions to address issues identified during the initial review.

Planning Process Performance and Commitment to Modernization
As Vaughan continues to grow, there is a pressing need for streamlined, digital solutions that enhance collaboration, automate routine tasks and provide real-time insights to support informed decision-making and efficient service delivery.

6. DESIRED FUTURE STATE

The City is advancing its planning and building application processes through strategic use of technology, automation, and AI. Automating aspects of Official Plan and Zoning By-law reviews will improve efficiency, reduce interpretation issues, and allow staff to focus on complex tasks—resulting in faster, more consistent reviews.

Through this RFEOI the City seeks to gather solution information and market interest from qualified Respondents for the availability of best in business, innovative solutions to:

- Streamline reviews of applications under the *Planning Act*
- Enhance compliance checks across development applications
- Achieve cost and operational efficiencies
- Reduce applicant wait times
- Accelerate the path from review to approval to construction

These goals support a broader vision of data-driven decision-making, optimized workflows, improved collaboration, and smarter, faster, and more transparent services. The City also aims to leverage AI for long-term planning, financial and risk management, and sustainable growth across Vaughan's communities.

7. SCOPE OF INTEREST

PREVIEW
TO DOWNLOAD AN UNMARKED VERSION OF THIS FILE YOU MUST BE A REGISTERED PLAN TAKER
WWW.BIDSANTENDERS.COM ORIGINAL DOCUMENT SOURCE

The City is seeking to explore and gain insight on innovative, AI-enabled digital solutions that support and enhance the planning and building application review process. Solutions are ideally capable of screening submissions across all planning application types under the *Planning Act* and identifying Official Plan and Zoning compliance. Respondents are encouraged to demonstrate capabilities that comply with the *Planning Act* and Ontario Building Code. The City is open to exploring information and gaining insight into technologies that support compliance with other applicable development regulations as noted in Section 10.

The City is particularly interested in gaining insight and information on solutions that address the following functional areas:

- **Application Intake and Validation**
  - Intelligent document recognition and data extraction from submitted materials
  - Automated completeness checks and validation against submission requirements to reduce manual review and improve first-time submission quality

- **Policy and Regulation Compliance**
  - Natural language processing (NLP) tools to apply zoning bylaws and official plan policies
  - AI-driven rule engines to assist with the assessment of applications for compliance with municipal and provincial regulations such as the Ontario *Planning Act* and the Ontario Building Code.

- **Decision Support and Analysis**
  - Analytics for application outcomes, approval timelines, and identify potential risks
  - Machine learning models to analyze historical data, detect trends, and support proactive planning decisions

- **Visualization and Public Engagement**
  - AI-enhanced modeling and scenario planning tools to support public consultation and stakeholder engagement
  - Chatbots or virtual assistants to provide applicants and the public with real-time guidance and information

- **Workflow Optimization**
  - AI based task routing and workload balancing to improve internal coordination and reduce circulation times
  - Integration with existing planning systems, permitting platforms, and GIS tools to ensure seamless data flow and operational efficiency.

7.1 Critical Use Cases

To support the modernization of the City's planning and building application processes, the City is identifying key areas where technology and AI can deliver meaningful improvements. The following use cases highlight priority functions—such as automated compliance checks, analytics, workflow optimization, and enhanced public engagement—where AI technologies can streamline operations,

improve accuracy, and elevate service delivery. The City is interested in understanding how their solutions address these areas in alignment with municipal and provincial planning regulations.

- **Automated Application Document Review and Validation -** AI tools automatically analyze submitted documents (e.g., site plans, reports, drawings, forms) to verify completeness, identify missing elements, and ensure alignment with submission requirements.

- **Automated Zoning and Official Plan Policy Compliance Checks** - Natural Language Processing (NLP) engines define information from the zoning bylaws, official plans, and building codes to assess whether applications meet regulatory requirements.

- **Automated Building Code Review** - AI systems analyze building plans to check for compliance with the Ontario Building Code.

- **Analytics for Application Outcomes** - Machine learning models that analyze historical data, approval timelines, identify high-risk applications, and forecast potential issues.

- **Intelligent Workflow Routing** - AI classifies building applications by complexity and routes them to appropriate reviewers or departments based on expertise and workload.

- **Conversational AI for Applicant Support** - AI-powered chatbots provide real-time assistance to applicants, answering questions, guiding them through submission steps, and offering status updates.

- **AI Enhanced Public Engagement Tools** - AI integrates with interactive visualizations (e.g., 3D models, GIS Maps scenario simulations) of proposed developments to support public consultation and feedback.

- **Data Driven Insights for Strategic Planning** - AI analyzes trends in application types, geographic distribution, and approval rates to inform policy development and long-term planning.

- **AI-Assisted Growth Forecasting** - AI models generate localized population and employment forecasts by analyzing development activity, economic and demographic trends, and incorporating Official Plan land use policies and zoning by-law considerations to support long-term planning over a 30-year horizon.

8. PROOF OF CONCEPT (PoC) COLLABORATION PROCESS

(a) To support the understanding of the RFEOI Responses, the City intends to review and potentially further explore Respondents who possess off-the-shelf or near completed solutions that are capable of supporting the City's goals and objectives. For clarity, the City is not seeking to develop a customized solution at this time.

PREVIEW
WWW.BIDSANDTENDERS.COM
YOU MUST BE A REGISTERED PLAN TAKER TO DOWNLOAD AN UNMARKED VERSION OF THIS FILE
ORIGINAL DOCUMENT SOURCE

(b) Respondents may be invited to participate in consultations, demonstrations, and/or collaborative discussion sessions with City staff. Respondents should begin with a clear understanding of a defined business challenge outlined herein. The City may select Respondent(s) for a future Proof of Concept (PoC) to work iteratively with the City to validate feasibility. The City may elect to subsequently pursue a formal competitive procurement process as authorized by its Procurement Policy, including an RFP, RFT, or RFQ. In circumstances where a solution may be unique in nature or proprietary to the Respondent, the City reserves the right to proceed via a Single Source or Sole Source award, in its sole discretion. For clarity, Respondents are not guaranteed to be selected for a POC or subsequent procurement process.

PROOF OF CONCEPT PARTICULARS

To assess the feasibility and effectiveness of a Respondent solution, the City may select a set of sample planning applications to be evaluated through a Proof of Concept (PoC) process.

During the PoC, Respondents will be expected to:

- Install and configure their solution for use in the PoC environment.
- Provide necessary software access and licensing to the City's Working Group.
- Train City staff on system functionality and usage.
- Collaborate with the Working Group to tailor the solution to Vaughan's Official Plan and Zoning By-law parameters.
- Enable reliable digital review and compliance checks for the majority (if not all) zoning considerations within selected zones.
- Share the automation logic used to demonstrate how rules and criteria are applied.
- Generate summary reports for each reviewed application, detailing which Official Plan and/or Zoning regulations were assessed and the resulting compliance status in a format verifiable by City staff.
- Respond to technical inquiries and provide support throughout the PoC.
- Demonstrate how the configured solution addresses the defined challenge statement and contributes to the City's modernization goals.

9. RESOURCES (including, but not limited to)

- City of Vaughan Official Plan 2010
- City of Vaughan Official Plan 2025 (pending approval)
- City of Vaughan Zoning Bylaws
- Oak Ridges Moraine Plan
- Greenbelt Plan
- Provincial Planning Statement
- Development Applications
- Building Permit Applications
- Block Plan Applications
- Investment Concierge Program Application
- Terms of reference for Response requirements as noted in Section 13

PREVIEW
www.bidsandtenders.ca
IS COMPLETED BY TAKER
COMPLETED AND MARKED VERSION OF THIS FILE
ORIGINAL DOCUMENT SOURCE

10. DATA OWNERSHIP AND PRIVACY

All data collected, generated, processed or otherwise made available in connection with the PoC is expected to remain the sole property of the City. Respondents must clearly describe how their proposed solution will ensure that the City retains ownership of the data. Respondents should also describe any proposed transfer of the City's data to sub-contractors or use of the City's data for purposes beyond the PoC, including training, analytics, or for improvement of the Respondent's solution.

11. CITY INFORMATION TECHNOLOGY FRAMEWORK AND STANDARDS

Respondents should consider their solution's compatibility with the City's existing IT environment and comply with its technical standards and security requirements. To improve compatibility with City existing IT environment Responses should clearly demonstrate alignment with industry standard infrastructure, data governance, and cybersecurity expectations to ensure proposed solutions deliver a level of service, availability and security appropriate for critical municipal services. More detailed requirements, including specific IT Standards and IT Security Standards, may be provided as a part of the Respondents engagement processes to clarify compatibility and compliance with various aspects of Respondent solutions.

12. ASSESSMENT FRAMEWORK

The City will review and assess Respondent solutions based on their ability to address the defined business challenge and deliver measurable improvements to the planning and building application process.

12.1 Assessment Criteria

Responses will be reviewed and assessed based on the following categories. Each criterion reflects the City's commitment to innovation, service excellence, and responsible AI adoption in the planning approvals process.

i. Functionality and Accuracy

- Demonstrates the ability to accurately define and apply the City's Official Plan and Zoning By-law.
- Effectively performs compliance checks aligned with municipal and provincial planning frameworks.
- Incorporates relevant legislation, including the *Ontario Planning Act*, Ontario Building Code and various plans into automated assessments.

ii. Ease of Use and Integration

- Provides an intuitive and accessible user experience for both City staff and applicants.
- Seamlessly integrates with existing municipal systems, including planning platforms, GIS tools, and document management systems.

iii. Configurability and Transparency

- Offers flexibility to accommodate Vaughan-specific planning parameters, workflows, and policy updates.

PREVIEW
YOU MUST BE A REGISTERED PLAN TAKER TO DOWNLOAD AN UNMARKED VERSION OF THIS FILE
WWW.BIDSANDTENDERS.COM ORIGINAL DOCUMENT SOURCE

- Clearly communicates how automation logic and rules are applied, supporting transparency and auditability, such as providing audit trails for AI-generated recommendations.

iv. Performance and Efficiency

- Demonstrates speed, reliability, and accuracy in document intake, validation, and compliance assessment.
- Reduces manual effort and processing time, contributing to faster and more consistent decision-making.

v. Support and Collaboration

- Shows a strong commitment to collaborating with the City's Working Group throughout the pilot and implementation phases.
- Provides high-quality training, onboarding materials, and ongoing technical support.

vi. Impact and Value

- Clearly articulates the potential to reduce resubmissions, accelerate approvals, and enhance service delivery.
- Aligns with the City's strategic priorities, including modernization, digital transformation, and customer-centric service.

vii. Innovation and Relevance to Planning Approvals

- Introduces novel approaches or technologies that enhance or streamline the planning approvals process.
- Demonstrates a clear understanding of municipal planning challenges and opportunities for innovation.

viii. Feasibility and Readiness for Pilot Deployment

- Presents a practical and achievable implementation plan, including timelines, milestones, and resource requirements using an off-the-shelf product.
- Demonstrates technical readiness and identifies potential risks with mitigation strategies.
- Delivered within an intended time frame of 12 weeks with possible extension at the sole discretion of the City.

ix. Potential for Scalability and Long-Term Impact

- Shows potential for expansion across departments or jurisdictions.
- Includes a vision for long-term integration and sustained benefits.

x. Commitment to Ethical AI and Data Privacy

- Adheres to ethical AI principles, including fairness, accountability, and transparency. Vendors should briefly outline how these are implemented, including any bias mitigation strategies and fairness testing.
- Demonstrates robust data governance practices and compliance with privacy legislation.

PREVIEW
WWW.BIDSANDTENDERS.COM
TO DOWNLOAD YOU MUST BE A REGISTERED PLAN TAKER
ORIGINAL DOCUMENT SOURCE
WATERMARKED VERSION OF THE FILE

xi. Model Drift Detection Capabilities

- Detect model drift using methods like performance tracking, anomaly detection, and baseline comparisons
- Support scheduled or event-based model revalidation and retraining
- Adapt to policy and regulatory changes with compliance tracking
- Include dashboards/tools for monitoring model health, accuracy, and auditability

12.2 PoC Assessment Activities

The City may conduct the following activities to support assessment:

- Review of sample application results and summary reports.
- Demonstration(s) of system functionality and rule logic.
- Feedback sessions with City staff.
- Assessment of solution scalability and long-term applicability.

13. RESPONSE REQUIREMENTS

Respondents should provide the following information in a brief submission response (max 5 pages) including:

13.1 Company Profile and Relevant Experience

- Brief overview of the organization, including size, structure, and areas of expertise.
- Description of relevant experience in AI, planning approvals, municipal processes, or similar domains.
- Examples of past projects or pilot deployments, particularly in the public sector.

13.2 Description of the Proposed Solution Pilot

- Clear explanation of the proposed AI solution and how it supports the planning approvals process.
- Key features, functionalities, and intended use cases.
- Overview of how the solution aligns with Vaughan's planning framework and digital modernization goals.

13.3 Expected benefits and outcomes

- Anticipated improvements in efficiency, accuracy, and service delivery.
- Potential to reduce resubmissions, accelerate approvals, and enhance user experience.
- Metrics or indicators that could be used to evaluate success.

13.4 Technology requirements and data needs

- Description of technical architecture, platforms, and tools required.
- Data inputs needed from the City (e.g., zoning data, planning documents, GIS layers).

PREVIEW
YOU MUST BE A REGISTERED PLAN TAKER TO DOWNLOAD AN UNMARKED VERSION OF THIS FILE
WWW.BIDSANDTENDERS.COM ORIGINAL DOCUMENT SOURCE

- Any dependencies, integrations, or third-party services involved.

13.5 Timeline and resource commitments

- Proposed timeline for pilot deployment, including key milestones.
- Roles and responsibilities of the proponent's team.
- Expectations for City staff involvement or support.

13.6 Scalability and cost-effective considerations

- Potential for scaling the solution beyond the pilot phase.
- Licensing model approach (i.e. tiered, enterprise-wide).
- Long-term value proposition and sustainability of the solution.
